

# JavaScript Developer

We are looking for a new member of our team to help us develop the web front-end portion of QTAKE Cloud, our video streaming and collaboration platform for film productions.

## Requirements

- JavaScript, CSS and HTML (advanced)
- Experience with front-end development (3+ years)
- Experience with a React framework
- Experience with TypeScript or other statically-typed language
- Basic experience with UNIX-based operating system (MacOS, Ubuntu, ...)
- Formal education in software engineering or related field
- MVVM (or other related design patterns)
- WebSocket
- Experience with Source Control Management tools (git, ...)
- Written and spoken English

## Preferred Optional Skills

- WebRTC
- TypeScript
- Experience with unit testing
- Pixel perfect eye
- React Redux

## Benefits

- A unique opportunity to co-create software that revolutionized Hollywood workflows.
- Knowledgeable colleagues mentoring you through the first months.
- Small team with casual open spaces for up to 5 people, stacked with latest AV equipment.
- Stable, long-term job with a career perspective.
- Work/life balance, flexible working hours, no overtime, remote work possible.
- Industry-competitive salary and end-of year bonuses.
- You name it. You know what makes you happy – let's talk about it.

## Application Process

Please send your CV and a brief presentation of the most interesting projects you have worked on to [office@in2core.com](mailto:office@in2core.com). If your skills and experience match our requirements, you will be invited for a job interview with our CTO.

## About Us

Founded in 2008, IN2CORE focuses on development of QTAKE software, its supporting applications (QTAKE Cloud, QTAKE Monitor, QTAKE Server) and hardware (ScreenPort SDI, QOD, MetaCoder) for professional filmmakers.

Our solutions are made for VFX-heavy film productions and have been used to shoot **James Bond**, **Avengers**, **Avatar 2**, **Mandalorian**, **Joker**, **Batman** and other blockbusters. In 2020, the integration of QTAKE and Moxion systems received the **Engineering Excellence Award** from the Hollywood Professionals Association.

We focus on Apple technologies and development mostly in Swift, but part of the code is written in Objective-C as well. Our applications use a wide range of Apple libraries and frameworks, such as AVFoundation, Core Data, Metal, SceneKit etc. Our choice of the Swift language for the implementation of QTAKE Cloud makes us part of a narrow group of early adopters pioneering its use on the server side.
