

Summer Internship - Automation QA

Still not sure how to spend this summer? If you would like to hunt down software bugs as a QA engineer, write automation tests or get an opportunity to turn coffee into a code, join our summer internship in SolarWinds.

Responsibilities

We are looking for talented SW Engineers who would like to spend the summer with experienced developers and QA engineers and get an excellent insight into the development process.

What do we expect you to know and have?

- General IT background
- Knowledge of programming in any of the following technologies: Python, C#, Java, Go, C++ or JavaScript
- Interest in networking, databases or systems and applications
- For some of the roles you should have an experience with Linux operating system

What are some desired skills?

- Basic DB and SQL skills
- Basic HTML/XML knowledge

What awaits you, besides the top technology and great coworkers?

You can attend the whole day seminars where we give you the opportunity to study new things. We prepare for you Hackaton, Coderetreat, Workshops and technical lessons.

You can enjoy comfortable office space with game rooms, billiard, Wii, and Xbox 360. If you are a PS4 fan, note that we have it, too, together with a VR gear.

We offer meal vouchers, flexible working hours, fruits in the kitchen, coffee and snacks.

The Internship takes 3 months (July – September). It is paid and you will get 6 days of vacation.
