

## Supervisor assessment of Bachelor's Thesis

**Student:** Minda Marek

**Title:** Augmented Reality on Smartphones (id 19020)

**Supervisor:** Dražanský Martin, doc. Ing., Dipl.-Ing., Ph.D., UITS FIT VUT

### 1. Assignment comments

The presented BSc. thesis has an average difficulty. This work is not connected to any other previous or running project. The assignment was fulfilled in all points.

### 2. Literature usage

Mr. Minda was very active in search for literature and he found all literature sources on his own.

### 3. Assignment activity, consultation, communication

At the beginning (winter semester) the activity was a little bit lower, however in the second part (summer semester) the activity of Mr. Minda was high, especially during his stay abroad (at FH Vorarlberg). All consultations were substantive and Mr. Minda was prepared well for each consultation and came on time.

### 4. Assignment finalisation

During the last phase of solving the BSc. thesis, Mr. Minda was abroad (at FH Vorarlberg), i.e. we were in contact only via e-mails and once we met in Dornbirn at FH Vorarlberg. However it can be confirmed here that Mr. Minda consulted the thesis and application on an appropriate level. The final version could not be checked in detail because of lack of time.

### 5. Publications, awards

I don't have any information about publications and awards connected to this work.

### 6. Total assessment

**very good (B)**

Generally, I propose the evaluation **B** (*very good*), especially because of lower activity at the beginning.

In Brno 31. July 2016
