

Supervisor assessment of Master's Thesis

Student: Bečka Petr, Bc.
Title: Application for Bank Payment Approval in SAP S/4HANA (id 21075)
Supervisor: Zendulka Jaroslav, doc. Ing., CSc., UIFS FIT VUT

1. Assignment comments

The thesis is based on a topic proposed by company and is focused on utilizing the latest SAP technology in the design of the front-end part of a web application for bank payments approval on the SAP S/4HANA platform. In my opinion, the assignment was completed in full. The same was confirmed by the consultant in the company.

2. Literature usage

Peter used not only the literature mentioned in the assignment, but found a number of other useful resources himself.

3. Assignment activity, consultation, communication

He worked on his master's thesis purposefully and systematically. We consulted continuously. During the consultations he showed very good orientation in solved problems. I appreciate his activity during his work on his thesis. The evaluation by the consultant in the company is similar.

4. Assignment finalisation

He finished the work in advance. Both the content and the final form of his master's thesis have been consulted. Most of my remarks and recommendations have been taken into account in the final version of the thesis.

5. Publications, awards

There is no official publication. His front-end is the part of the "Approve Bank Payments" application developed by a larger team.

6. Total assessment

very good (B)

I appreciate Petr's activity and independence, his ability to study new issues in a short time and to apply them in the development of the application. In my opinion, he showed his engineering skills. Therefore, I propose the evaluation of his master's thesis with the grade "**very good (B)**".

In Brno 7. June 2018
