

Supervisor assessment of Master's Thesis

Student: Lukáš Jakub, Bc.

Title: Tracking People in Video Captured from a Drone (id 23056)

Supervisor: Goldmann Tomáš, Ing., DITS FIT BUT

1. Assignment comments

The goal of the thesis was to develop an algorithm for tracking people in the video and subsequent visualization of their trajectories. It is necessary to take into consideration that there are existing approaches and algorithms available for this kind of problem, I consider this assignment to be of an average difficulty.

2. Literature usage

The student found the literature sources and other study sources by his own.

3. Assignment activity, consultation, communication

I supposed that the amount of consultations will be higher than it was. The student was prepared and came on time, however the overall progress of his work was too slow without seeing new contributions.

4. Assignment finalisation

The last version of thesis that I received has not been completed and the content has not been consulted with me.

5. Publications, awards

No publication activity or awards are known to me.

6. Total assessment

sufficient (E)

It is totally obvious that the thesis has been submitted unfinished. The student did not send me the final version of the thesis and I could just check the preliminary results. Generally, I evaluate the activity the student as **sufficient (E)**.
