

Supervisor assessment of Bachelor's Thesis

Student: Eliáš Radoslav

Title: Running Motion Analysis (id 23845)

Supervisor: Goldmann Tomáš, Ing., DITS FIT BUT

1. Assignment comments

The goal of the thesis was to develop an tool for running motion analysis. It is necessary to take into consideration that there are existing approaches and algorithms available for this kind of problem, I consider this assignment to be of an average difficulty.

2. Literature usage

The student acquired the study sources by himself. The sources used are relevant to the work.

3. Assignment activity, consultation, communication

The student was very active during the solution of the bachelor's thesis. Although the number of consultations could have been higher, the all required tasks were solved.

4. Assignment finalisation

The work was completed well in advance and the final content was consulted with me.

5. Publications, awards

No publication activity or awards are known to me.

6. Total assessment

Overall, I am very satisfied with the student's attitude, so I propose the final grade **A (excellent)**.

excellent (A)
